

# What Google Scholar Can Do for You

Understand what you are getting:

What does page rank mean? <http://en.wikipedia.org/wiki/PageRank>

Google's explanation <http://www.google.com/technology/>

Two overridingly important points:

Google Scholar ***does not*** index the entire universe of scholarly literature

Google Scholar ***does not*** index the complete holdings of this library

Google Scholar ***does*** provide access to Library holdings contained within its index

- Advanced search options
- Scholar Preferences → From off-campus, need to set your institution to UIUC. This will give you direct access to what the library owns.

[Can quantum-mechanical description of physical reality be considered complete? -](#)

[A Einstein](#), [B Podolsky](#), [N Rosen](#) - PHYSICAL REVIEW Phys Rev, 1935 - APS

In a complete theory there is an element corresponding to each element of reality. A sufficient condition for the reality of a physical quantity is the possibility of predicting it with certainty, without disturbing the system. ...

- Relevance  
Google Scholar aims to sort articles the way researchers do, weighing the full text of each article, the author, the publication in which the article appears, and how often the piece has been cited in other scholarly literature. The most relevant results will always appear on the first page.
- “Recent Articles”  
*From Google:* It's not just a plain sort by date, but rather we try to rank recent papers the way researchers do, by looking at the prominence of the author's and journal's previous papers, how many citations it already has, when it was written, and so on.
